Rami Dmaur

Full Stack Engineer

timurwelike@gmail.com | github.com/RamiDmour | t.me/RamiDmour

linkedin.com/in/rami-dmaur-19b5201b3

Poland | Remote | Europe/Warsaw | Full-time or contract | Available ASAP

Profile

Software Engineer connecting Flutter applications, TypeScript/Node.js and Python services, and data into complete products. Designed systems from scratch, implemented financial and document workflows, integrated ML and led small teams. Earlier experience in React and React Native.

Core technologies

Flutter / Dart, TypeScript / Python, API architecture, PostgreSQL, Docker, ML integration, Technical leadership

Employment history

ScanChamp

Mar 2026 — present | Software Engineer · Flutter / ML / Backend

Product from scratch to release. Ongoing development in computer vision, OCR, camera processing and document workflows.

Project-based development

Aug 2025 — Mar 2026 | Senior Flutter Developer

Shortly, EMCD and Dwella. Analytics infrastructure, Loans and Coinhold financial workflows, and a mortgage application.

Octy Marketplace

Dec 2024 — Aug 2025 | Flutter Team Lead · Backend ownership

Architecture, team formation, multi-chain marketplace and loyalty ML. Development ended before production when funding stopped.

Success Craft

2024 | Senior Flutter Developer

Tigris Apps staffing platform. Refactoring, performance and direct communication with an international client.

Developers Heaven

Within 2022–2024 | Flutter Developer

Belpost, RAD, Groshyk and Chesnok. Modular retail platform, spatial search and Fastlane.

Contract engagements

May 2022 — Dec 2024 | Senior Flutter Developer / Team Lead

MeetPay, OneTouch, athlete monitoring, TimRusGroup and Softeco. Roles varied by project.

iTechArt Group

May 2021 — May 2022 | Junior–Middle Flutter Developer

Internal SDK applications and Canadian clinics platform: refactoring, maps, accessibility and calling.

Gieksby Development / Secreate

Oct 2020 — May 2021 | Junior Flutter / React Native Developer

Collaboration software, group calls, chat optimization and a language-learning audio engine.

SmartAppTechnology Limited

Jul 2019 — Oct 2020 | Full Stack Web Developer

WorkFusion document search, people-counting video module and Java/AWS Lambda IoT integrations.

Selected projects

ScanChamp

Software Engineer · Flutter / ML / Backend | ScanChamp | Released | Ongoing development

A document scanner with on-device vision, OCR, searchable PDFs and editing. Started from scratch, taken to release and still evolving.

- Started the application from scratch and established its architecture; continued model tuning, OCR, image enhancement and camera optimization after the team expanded.
- Developed a Fastify/PostgreSQL document-sharing service with S3-compatible storage, subscription checks, transactional quotas and expiring links.
- Built incremental OCR-backed PDF search with persistent caching, fuzzy matching and highlighted page snippets.
- Implemented persistent processing isolates and performance instrumentation; created dataset and model comparison tools.

Technologies: Flutter, Fastify, PostgreSQL, Docker, Dart, BLoC, OpenCV, Dart FFI, TFLite, ONNX Runtime, OCR, Swift, Kotlin, ObjectBox

Camera and concurrency

Persistent worker isolates and TransferableTypedData reduce repeated worker setup and image-copy overhead. The current team architecture separates live detection from full-resolution capture and discards stale frames instead of accumulating work.

Computer vision and evaluation

Investigated document boundaries, OCR and image enhancement. Dataset tools track document identity, capture sessions and splits. Model/runtime comparisons include stage timings and visual inspection: a better score is not useful if the crop loses text.

Search without repeated OCR

An observable catalog, file fingerprints and a persistent text cache support incremental indexing. Token-based fuzzy search returns page numbers, sentence snippets and highlight ranges. This is local lexical search.

Editor and document lifecycle

Developed PDF markup and cloud synchronization. Current save rollback, atomic replacement, conflict handling and several native fixes reflect joint work with Ruslan Barysiuk, who joined later.

Backend for sharing

TypeScript/Fastify, PostgreSQL, Garage object storage and Docker Compose. File validation, expiring links, range downloads and cleanup are part of the implementation.

Engineering diagnostics

Opt-in traces distinguish elapsed and per-stage time, first rendered frame, preprocessing, inference and worker round trips. Research candidates are separate from release defaults.

Octy Marketplace

Flutter Team Lead · Backend ownership | Octy Marketplace | Pre-production | Funding ended

A video marketplace combining multi-token payments, multi-chain integrations and an RL loyalty prototype. Pre-production; funding ended.

- Designed architecture, data models and backend; organized delivery and hired and mentored two Flutter developers and a designer.
- Worked on internal transfers, deposits, withdrawals, multi-provider rates and multi-token checkout across TON, Bitcoin, TRON, Solana and Ethereum.
- Developed TensorFlow/Keras loyalty research with DQN and PPO approaches; implemented marketplace roles and seller-verification workflows.

Technologies: NestJS, TypeScript, Prisma, PostgreSQL, Redis, Docker, Flutter, TensorFlow, Keras, DQN, PPO

Financial workflows

Internal balances and conversion, multiple market-price sources, protective rate rules and checkout from several assets. The server uses NestJS, Prisma transactions, PostgreSQL and Redis.

Marketplace and team

Video product feed, seller verification, KYC/AML-related product flows and roles from buyer to owner. Led a small team from the initial technical design.

Reinforcement learning

DQN with replay and a target network, a custom Gym environment and a separate PPO actor/critic implementation. Evaluated the approaches through simulation.

OneTouch

Team Lead · Full Stack Developer | Selected engagements | Pre-production | Funding ended

Crypto real-estate transactions with seller verification and escrow on Ethereum and TON. Pre-production; funding ended.

- Owned backend design and implementation, listing and search, seller-verification and KYC/AML-related flows.
- Developed and integrated escrow smart-contract workflows for Ethereum and TON; formed the team and presented the technical solution to investors.

Technologies: Flutter, FastAPI, Ethereum, TON, Python, SQLAlchemy, TypeScript, Express, Solidity, Docker

AI Lawyer

Flutter / Backend Developer | TimRusGroup | Commercial project

An AI-assisted legal-text product with a Flutter client and Python backend.

- Developed a Flask backend and its client integration; implemented text formatting and signing workflows.

Technologies: Python, Flask, REST, Flutter, Hydrated BLoC

Athlete monitoring

Flutter / Serverless Developer | Selected engagements | Commercial project

An internal activity and nutrition tracker for the Belarusian Ministry of Sports and Tourism.

- Built the application from scratch, designed its database and implemented food and activity data parsers.
- Used a Supabase serverless approach and initiated adding a UX/UI designer.

Technologies: Flutter, GetX, Supabase, PostgreSQL, Hive, Freezed

CT Teacher

Full Stack Developer | Personal project

A personal exploration of AI-generated exercises, video lessons and educational games.

- Explored exercise and video-lesson generation, voice synthesis and games within a Python backend and Telegram/React learning platform.
- Integrated content pipelines and rendering tools in an educational research prototype.

Technologies: Python, FastAPI, PostgreSQL, Redis, React, TypeScript, aiogram, Docker, AI integration, ffmpeg

WorkFusion document search

Full Stack Web Developer | SmartAppTechnology | Commercial project

Full-text document search, initially on Node.js and later Elasticsearch.

- Implemented and optimized document-search functionality, progressing from custom logic to Elasticsearch.

Technologies: Node.js, Elasticsearch, React, Redux, Web Workers

Shortly

Senior Flutter Developer | Project-based development | Commercial project

Short-form interactive series with a vertical video feed, purchases and rewarded ads. My focus: analytics infrastructure and developer tooling.

- Built typed analytics API generation from event configuration, shared context providers and a custom lint for unintegrated tracking methods.
- Implemented a Hive-backed event queue with ordered delivery and retries; corrected episode watch time and push-launch attribution.
- Implemented replay for coins or rewarded ads and automated Android delivery with TeamCity, Firebase App Distribution and a Fastlane migration.

Technologies: Flutter, Dart, BLoC, Hive, Code generation, custom_lint, AppsFlyer, Firebase, TeamCity, Fastlane

Configuration to tracking API

A build_runner generator produces typed tracking methods and documentation. Providers supply device, user, session and viewing context. Events route to Firebase, AppsFlyer, Facebook and the custom analytics API.

Developer tooling

A custom_lint package detects declared tracking methods that are never called. It helps identify missing integration while working in the codebase.

Delivery and metric correctness

Persisted event IDs, retries with delays and a single sender preserve the intended delivery order. Watch-time fixes cover episode-level persistence. The persisted queue supports retry after network interruptions.

Language learning

React Native Developer | Secreate | Commercial project

Language learning with spaced repetition and audio playback.

- Implemented registration and the continuous word-playback core; fixed React web issues.

Technologies: React Native, TypeScript, Redux, React

Video crowd analysis

Full Stack Web Developer | SmartAppTechnology | Commercial project

A real-time people-counting module for crowd-density analysis.

- Developed the video-monitoring module for real-time people counting.

Technologies: Video processing, Node.js, React

Voice-controlled IoT

Full Stack Web Developer | SmartAppTechnology | Commercial project

Smart-device integration and voice control for a smart chair.

- Implemented voice-control workflows and Java integrations on AWS Lambda.

Technologies: Java, AWS Lambda, Node.js, React

Tremor screening

Flutter / Backend / ML Developer | Academic project

An educational prototype collecting smartphone sensor data for binary classification.

- Built sensor collection in Flutter, a Flask preparation API and a TensorFlow/Keras classifier returning a screening recommendation.

Technologies: Flutter, Python, Flask, TensorFlow, Keras, Mobile sensors

Education and languages

BSUIR, 2023 · Faculty of Computer-Aided Design · Electronics and Software Engineering
